1. Connect the water level sensor cable shield to one of the Terminals.

2. To Channel 1-10, the common terminal must be connected. The common return wire (black) will always be connected to the common terminal. Order 1-10 elements without any gaps (0 to 10 elements must be connected).

3. If less than 16 elements are connected, they must be connected in the same order. If more than 16 elements are connected, the elements will be divided into multiple channels.
