

We are proud to say, "Made in the U.S.A.!"

ANSI Pump Coupling Guards

Standard construction for our coupling guards is 304SS, with aluminum construction available upon request. Our standard design consists of fully welded components with a super durable polyester safety orange powder coated finish. These guards are designed to meet or exceed OSHA safety requirements and constructed for longer life and maximum durability. If an application calls for a non-metallic coupling guard, PPE also offers UniGuard Machine Guards.

Our local inventory of standard guards fit Group I, II, & III ANSI pump / NEMA motor combinations and are in stock ready to ship.

Box Type Guard

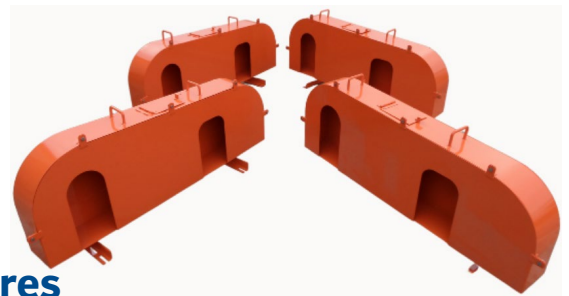

Our box guard incorporates a hinged design that allows for easy installation and access. This guard offers an expandable design to accommodate versatility for multiple coupling types with differing shaft spacing.

Barrel Type Guard

Our barrel guard incorporates a unique design to easily mount to most common ANSI pump models including (but not limited to) Goulds, Flowserve (Durco), Summit, Peerless and Griswold.

Custom Guarding

Custom designed and fabricated machinery guarding per your equipment needs. Custom guards are available upon request for most common applications such as belt driven equipment, non-ANSI pump applications, agitators, compressors, and virtually any other rotating equipment category.

Standard Features

ANSI B15.1 COMPLIANT OSHA 1910.219 COMPLIANT ANSI Z535 COMPLIANT

We are available to perform equipment surveys & field verify dimensions to ensure proper fit.
